Opinion of consultant:

History - noted as on chart - fract pelvis - Has been run-
ing fever up to 101⁶ - since entrance to hosp. Complains of
slight burning on micturition -
Rx. Patient in hip sling - Multiple abrasions and cathecers
about head, face, and body
Pharynx - clear - some mucoid post nasal drip noted.
No cervical adenopathy of importance
Bilateral parotid gland enlargement - soft, non-tender (juvs?)
Heart & Lungs neg.
Abd - soft, no masses, L & S not felt
Suggest - serology -
Imp. - The only positive finding is in the history of burning on
micturition - If urine is negative - the only explanation

M.C.

I can offer at this time is that the fever is due to absorption of hemorrhage about the focal sites - although in those cases the temperature usually fluctuates about 100°.

[Kindly have Wassermann taken to rule out Jaundice]

Do not advise any further medication until a more positive diagnosis is made. If fever persists - would like to see again.
