Test I 4

Test II 2

Score 6

Test I
20 minutes

Name H2 R. 16. 272

Municipality _____

Directions: Write the word true if the sentence is true and false if it is false or partly false.

- ✓ True 1. The double combination $7 + 7$ is a direct, "bridging" combination.
- ✓ True 2. In grouping objects on the board in teaching number concepts to beginners, the teacher should not represent six by six birds in one unbroken line and nine by nine kites in an unbroken column.
- ✓ False 3. In a rate or curriculum test, the pupils are given all the time they need to finish the test provided they do not waste their time.
- X True 4. If a teacher is alert and experienced, she may use fairly big numbers in developing a new process or principle provided she makes all explanations clear.
- ✓ True 5. In teaching the various types of the division of decimals as well as the division of fractions, the teacher should generally teach one type, and eliminate one step of difficulty at a time.
- _____ 6. One fundamental skill to develop in adding or subtracting dissimilar fractions is to be able to determine quickly how the L.C.D. can be found.
- _____ 7. In the example $.44 \overline{)88} = 20$, the principal type of error is the inability to locate or consider the decimal point properly in the quotient.
- _____ 8. The decimal equivalent of $7/8\%$ is .00875.
- _____ 9. In $5 - 1/2 \div 3 - 1/3 = 11/2 \times 10/3 = 55/3$ or $18 - 1/3$, the principal type of error is the lack of knowledge of multiplying the dividend by the reciprocal of the divisor.
- ✓ True 10. In adding .8, 3.4, and .125, the fundamental skill involved is the ability to write decimal numbers in their proper places with the decimal point in a straight column.
- ✓ False 11. If the development of each lesson or process is thoroughly done, satisfactory progress in arithmetic can easily be attained by pupils even without drill work.
- _____ 12. Record sheets which show what types of combinations or problems pupils are weak in are superior to those which show the nature or type of the errors committed.
- X True 13. Teaching pupils to check their answers to examples or problem and to estimate answers before solving them actually leads to much waste of time and does more harm than good.
- X True 14. In testing pupils on the 15 types of the subtraction of fractions to determine progress or achievement, the teacher should arrange the examples in such a way that those illustrating each type are near each other.
- ✓ True 15. Children are interested in problems that are expressed not in the usual matter-of-fact fashion but in a story form.
- ✓ True 16. It is easy to rationalize "carrying" in addition and multiplication to primary pupils.
- X True 17. Cancellation should be taught from the very beginning of the pupils' work with fractions because it is short.
- X True 18. The time span or interval between drills must be very long at first and gradually shortened as the facts become permanently learned.
